Projects

Credit Cards Spend Analysis | *SQL*

July 2025

- Analyzed credit cards dataset using SQL to uncover market concentration by identifying that the top 5 cities drove 58.5% of total credit card spend. (with Mumbai leading at 14%)
- Conducted a gender-based spend analysis, which revealed that female customers accounted for more than 53.5% of spending in every expense type, highlighting 'Bills' as the top category for this demographic.
- Uncovered and Analyzed that the 'Platinum' card for 'Grocery' expenses saw the highest (57%) month-over-month growth in January 2014, providing a clear signal of a successful campaign or emerging consumer trend.
- Measured and Confirmed that 'Bengaluru' was the fastest city to reach its 500th transaction, taking only 81 days from its first transaction, indicating rapid customer adoption and high engagement in that region.

Noon Food Delivery Data Analysis | *SQL*

June 2025

- Identified 24 customers acquired one month prior via promotional offers who had not placed an order in the last 7 days.
- Developed a data model to implement a personalized communication trigger for customers after their every 3rd order.
- Determined that 43.9% of customers were organically acquired in January 2025. (placed first order without a promo code)

Olympic Games Analysis | *SQL*

January 2025

- Analyzed medal distribution to determine the USA as the top-performing country, securing over 300+ gold medals which accounts for 9% of all gold medals awarded.
- Calculated total silver medal counts for over 300+ participating teams and identified the peak year for silver medal achievement for each, showcasing historical performance analysis.
- Identified a rare cohort of athletes, which consists of 62 individuals who secured gold medals in the same event across 3 consecutive Summer Olympics (Year 2000 onwards), showcasing sustained dominance.

COVID-19 Data Analysis | *SQL, Tableau*

December 2024

- Examined data using SQL to extract and obtain information such as total cases, deaths, and % population infected, etc.
- Built a visualization using Tableau to present data insights and applied linear regression to predict future trends in % population infected per country across the globe.

Skills

Languages: Python (Pandas, NumPy, Matplotlib), SQL

Tools: MySQL, Microsoft SQL Server, Tableau, Postman, Advanced Excel, Power BI

Miscellaneous: Window functions, Joins, Common Table Expressions (CTEs), Aggregate functions, Systems Thinking, RCA (Root-Cause Analysis), User Research, Data Analysis, KPI Trees, Design Thinking

Education

St. Joseph's University

Jul. 2023 – May 2025

MSc in Biotechnology

Ms Ramaiah College of Arts, Science and Commerce

Sep. 2020 – Aug. 2023

BSc in Chemistry, Biotechnology and Microbiology

CGPA: 8.86

Achievements

- Solved 150+ SQL problems on coding platforms like LeetCode, HackerRank, DataLemur and StrataScratch.
- Among top 1 percent of over 60+ students class in 5th and 6th semester.
- Surveyed and assessed chicken shawarma vendors in Bangalore, identifying 60% (6 out of 10) as safe consumption locations based on lab testing of the specimen.

Position of Responsibility

- Member of a team responsible for managing 3 tier structure of student mentees, student mentors, and faculty advisors.
- Member of Freshers' Committee of my college which was responsible for organizing Freshers event for 200+ students.
- Publicity Associate of XTASY 2021 (Annual Fest), responsible for marketing the event to 5+ colleges.
