PROFESSIONAL SUMMARY

Data Science enthusiast with hands-on experience in analytics, machine learning, and dashboarding. Proficient in Python, SQL, Excel, and Tableau, with projects in clustering, churn analysis, and LLMs. Currently pursuing an MBA in Business Analytics to deepen expertise in data-driven decision making.

EXPERIENCE

- PriceLabs** Sept 2023 - Present
Product Specialist Pune
 - Fast-tracked promotion in 7 months for consistently exceeding analytical performance benchmarks.
 - Led performance analysis initiatives and built Weekly and Monthly analytics dashboards using Excel and Tableau to track KPIs, operational metrics, and business performance across global portfolios.
 - Performed data-driven retention analysis; identified at-risk customers and recommended intervention strategies.
 - Developed a house rent prediction model using XGBoost on multi-city rental data; performed EDA, feature engineering, and model evaluation to support internal pricing intelligence initiatives.
 - Applied machine learning (K-Means Clustering) on user demographics, region, and listing metrics to identify distinct user cohorts. Insights from these clusters informed targeted engagement strategies and UX improvements.
 - Mentored 20+ new analysts and introduced a checkpoint-based quality control system, improving reporting efficiency and reducing onboarding ramp-up time.

PERSONAL PROJECTS

- Case Study: Analyzing Customer Churn in Tableau**
 - Tools & Technologies Used: Tableau, SQL, Python, Excel
 - Conducted exploratory analysis and investigated churn patterns using Tableau. Created interactive dashboards to visualize trends and identify key factors affecting customer retention, leading to actionable insights.
- Shasn Copilot Bot – Predictive Assistant for Board Game Decision-Making**
 - Built an intelligent Copilot Bot for the strategic board game "Shasn" using Large Language Models (LLMs) to predict the most likely card type a player would choose based on their responses.
 - Utilized OpenAI's GPT API for natural language understanding and prediction logic; integrated prompt engineering techniques to fine-tune contextual accuracy.
 - Designed a user-friendly CLI interface in Python to simulate gameplay inputs and provide real-time recommendations.
 - Applied basic data tracking and scoring logic to learn player behavior and optimize decision suggestions over time.

TECHNICAL SKILLS AND INTERESTS

- Languages:** Python (NumPy, Pandas, Matplotlib, sk-learn, PyTorch, PySpark), SQL, Machine Learning, R Studios
- Developer Tools:** Tableau, Power BI, MS Excel
- Soft Skills:** Resilience, Risk Taker, Quick Decision Maker, Better Performance Under High Pressure, Continuous Learning, Good Communication Skills, Creativity
- Coursework:** Statistics, Probability, Exploratory Data Analysis
- Areas of Interest:** Data Analysis and Visualization, Machine Learning, Data-Driven Decision Making

CERTIFICATIONS

- AI Python for Beginners (DeepLearning.AI)
- AI Agents in LangGraph (DeepLearning.AI)
- Data Manipulation with Python (Data Camp)
- Data Preparation with SQL (AlmaBetter)
- Data Analysis using Excel (AlmaBetter)
- Business Analysis - Dashboarding with Power BI and Tableau (AlmaBetter)

EDUCATION

- Manipal University Jaipur** Jaipur, Rajasthan
M.B.A. Business Analytics 2023 - Present
- Symbiosis Skills & Professional University** Pune, Maharashtra
B.Sc. Data Science, 8.31 CGPA 2020 - 2023
