EDUCATION

- Raj Kumar Goel Institute Of Technology** Ghaziabad
B.Tech in Computer Science 2020-2024

EXPERIENCE

- Ken Research** Gurgaon, India
Junior Backend Developer Jan 2025 – Present
 - Research Report Automation:**
 - * Built an AI-powered system using GPT-4o, LangChain, Groq, and Perplexity to auto-generate market research reports with 70% analyst-verified accuracy.
 - * Delivered structured HTML outputs including dynamic TOC, segmentation, and FAQ sections for production-ready reports.
 - * Used multi-source validation (Perplexity, Tavily, Google, DuckDuckGo), Playwright for infographics, BeautifulSoup, and Pydantic for parsing and formatting.
 - Tag Generation System:**
 - * Designed a prompt-based system that dynamically generated 30,000+ tags for various industries and use cases.
 - * Enabled auto-tagging integration for blog posts, boosting SEO relevance and content classification accuracy.
 - * Used Celery, Redis, and cron jobs for asynchronous background processing and scheduling.
 - Search and Infrastructure:**
 - * Built scalable search pipelines using Elasticsearch for querying across millions of market records.
 - * Engineered data dump and indexing systems to support real-time analytics and user personalization.
 - * Optimized API stack using Nginx, Gunicorn, and caching strategies to reduce latency from 5 seconds to milliseconds.
- Ken Research** Gurgaon, India
Backend Intern July 2024 – Jan 2025
 - Import/Export in Django Admin:**
 - * Built CSV/XLSX import-export functionality across all Django models for operational ease.
 - * Integrated duplicate prevention and field-level filtering for clean data ingestion.
 - * Used Django signals, Celery tasks, and pandas for efficient and modular backend workflows.
 - Bulk and Single File Uploading System:**
 - * Developed a Django-based multi-file and single file upload interface for admin data entry.
 - * Improved upload reliability and performance by 40% through Celery queues and retry logic.
 - LinkedIn Outreach Automation:**
 - * Automated lead scraping and LinkedIn messaging workflows using Selenium.
 - * Reduced manual effort by 60% for marketing teams and improved outreach targeting.

PROJECTS

- JWT Authentication System:** Developed a secure JWT-based authentication system using Node.js, Express.js, and PostgreSQL. Designed RESTful API endpoints for user registration, login, and profile management with route protection. Managed PostgreSQL database for user credentials and session data, optimizing query performance.
- Real-Time Chat Application:** Built a chat platform using Python, Flask, and Socket.IO, enabling users to create and manage workspaces, channels, and profiles for live communication. Implemented file and image sharing features with a user-friendly frontend using HTML, CSS, and JavaScript.

PROGRAMMING SKILLS

- Languages:** Python, JavaScript, TypeScript, SQL, HTML/CSS
- Backend:** Django, Flask, Node.js, Express.js, Celery, PostgreSQL, MongoDB, Prisma
- Frontend:** Next.js, React, Socket.IO, Tailwind CSS
- Cloud & Tools:** AWS S3, Cloudinary, Elasticsearch, Nginx, Gunicorn, Selenium, OpenAI, LangChain, BeautifulSoup
