Education

Vellore Institute of Technology

MTech Integrated Computer Science and Engineering

September 2020 – June 2025

Vellore, Tamil Nadu

CGPA: 8.81/10.00

Technical Skills

Languages: Python, SQL, Java, C

AI/ML: Ollama, TensorFlow, LangChain, LlamaIndex, ChromaDB, FAISS

Data Tools/Visualization: Pandas, NumPy, PowerBI, Streamlit, Matplotlib, Seaborn

Platforms/Tools: Microsoft Azure, Linux, Git, GitHub/GitLab, Docker, Jira

Experience

Student Trainee (Internship)

September 2024 – June 2025

Bosch Global Software Technologies

Bengaluru, Karnataka

- Designed a pipeline to dynamically generate 3D model backgrounds from voice prompts for in-car customization, simplifying multi-step generation design into an automated, real-time process, Showcased in CES 2025 earning team wide appreciation.
- Contributed to the Evoco (AI Personal Companion) team under the Personalization topic by designing restaurant recommendation algorithms, preparing datasets, conducting model training, evaluation, and performance benchmarking; additionally performed scenario-based and exploratory testing for in-car AI systems
- Built scalable synthetic data generation pipelines using LangChain and Ollama, alongside exploring local ASR/TTS models and LLMs for on-device edge AI in Android-based automotive systems using emulators and WSA for testing functionalities
- Collaborated with cross-functional international teams for OEM PoC delivery, handling environment setup, cross-platform integration to create a Demo-ready in-car environment, including application server setup, vehicle calibration data configuration, validation testing, bug tracking, and automating workflows using Linux scripting and socket programming.

Projects

Offline Speech Recognition Android App with Streaming ASR, VAD | *Sherpa-ONNX, Kotlin*

March 2025

- Built an offline Android app using prebuilt Sherpa-ONNX models with support for VAD, streaming, and non-streaming ASR, enabling real-time speech recognition on edge devices.
- Designed for low-latency, privacy-first voice interaction in connectivity-limited or sensitive environments, targeting hands-free speech-driven assistants and accessibility solutions.

Real-Time Sign Language Recognition and Tamil Text Conversion | *LSTM, MediaPipe, OpenCV*

August 2024

- Developed a solution for the deaf and hard-of-hearing community, facilitating communication for over 63 million people through real-time sign language detection with regional language support
- Utilized OpenCV and Media Pipe for precise hand detection, and LSTM models, achieving 85.6% accuracy and TensorFlow for accurate gesture interpretation, Catamaran Font for Tamil text conversion.

ScrapeTalk: Chatbot Conversation with Web Scraped Insights | *Python, Langchain, Streamlit*

March 2024

- Developed a real-time intelligent chatbot that scrapes data from user-provided URLs using BeautifulSoup4 and WebBaseLoader, and leverages RAG methodology with LangChain for advanced contextual understanding
- Transformed unstructured web and document data into vector embeddings via ChromaDB, and integrated locally hosted LLMs via Ollama, and added document upload support for deeper, multi-source insights.

Certifications

Building Cloud Native and Multicloud - IBM – Coursera

March 2024

Accenture's Developer Virtual Experience Program – Forage

April 2023

Conference Presentations

International Conference on Integration of Emerging Technologies for the Digital World 2024 (ICIETDW'24)

- Scrapetalk: Chatbot Conversation with Web Scraped Insights [[IEEE Xplore Link](#)]
- Flourishing Fields: Modernizing farming with real-time AI-powered tomato disease detection and monitoring [[Link](#)]

Languages

English (Fluent), Tamil (Native), Telugu (Working Proficiency)
