EDUCATION

Master of Computer Applications (MCA) 2023 - 2025 | Vellore Institution of Technology, Bhopal
Bachelors in Computer Science 2019-2022 | Kalyani Mahavidyalaya

- CGPA: 8.29

- CGPA: 8.10

Relevant Coursework

Database Management System
Operating System
SDLC

Data Structures and Algorithms
Object Oriented Programming

SKILLS

- **Language:** JavaScript, Python, Java, HTML & CSS.
- **Frameworks/Libraries:** React.js, React Native, Expo, Node.js, Express.js.
- **Databases:** SQL, MongoDB, Firebase.
- **AWS:** IAM, VPC, EC2, S3 Bucket, Lambda, Route53.
- **Tools:** Git Desktop, Postman, Thunder-client, MongoDB Compass, Android Studio.

INTERNSHIP

Dortex.ai – Software Developer Intern

November 2024 – February 2025

- Assisted in developing a full-fledged application with role-based access control using React Native, Node.js, Express.js, MySQL, in improving project tracking efficiency and reducing role-based errors.
- Strengthened application security by implementing best practices, effectively minimizing unauthorized access risks
- Optimized backend operations, improving API response time, leading to a smoother user experience.
- Built and launched a React Native mobile application with Firebase.
- Collaborated with cross-functional teams, enhancing app usability and increasing user engagement by 25%.

PROJECTS

Doctor Appointment Booking System:

[Github](#)

- Developed a full-stack app using **Node.js**, **Express**, **MongoDB**, and **React** for managing doctor-patient appointments.
- Built a user-friendly interface for scheduling, rescheduling, and managing appointments.
- Integrated **JWT** authentication for secure login and **Cloudinary** through **Multer** middleware for image and file storage management.
- Developed **RESTful APIs** for smooth client-server communication, ensuring seamless data flow and booking updates.
- Applied security best practices, including password encryption with **Bcrypt.js**, to ensure robust data protection.

AI Travel Planner:

[Github](#)

- Developed a **React Native** app with **Expo**, featuring a sleek and responsive UI, utilizing **Flat List** for optimized data rendering.
- Integrated **Firebase Authentication** to enable secure sign-up, sign-in, and user session management with real-time database connectivity.
- Implemented React Navigation with **Expo Router** to provide smooth transitions using both Tab and Stack navigation patterns.
- Integrated **Gemini AI** to generate personalized trip plans, enhancing the app's capability with AI-driven travel suggestions.
- Enabled backend operations with Firebase, including adding, retrieving, updating, and deleting data for seamless trip management.

Task Management App:

[Github](#)

- Developed and deployed **RESTful APIs** using **Node.js** and **Express.js** for task management functionality.
- Implemented secure role-based user authentication and authorization with **JWT** and **Bcrypt.js** and security best practices.
- Designed efficient **MongoDB schemas** for storing **user and task data**, optimizing queries for performance.
- Implementing **Redux** for state management to handle task data across components effectively.
- Deployed the backend application on **AWS EC2**, ensuring practices for scalability and high availability.
- Configured **AWS VPC**, **security groups**, and **IAM roles** for secure and optimized access to resources
