Hyderabad, India

EDUCATION

- **Gokaraju Rangaraju Institute of Engineering and Technology (2020-2024)** Hyderabad, India
Bachelor of Technology in Electronics and Communication Engineering, CGPA : 7.3/10.0
- **Sasi Junior College** Velivennu, India
Andhra Pradesh Board of Intermediate Education, CGPA : 9.67/10.0
- **Sasi Educational Institutions** Velivennu, India
Andhra Pradesh Board of Secondary Education, CGPA : 8.8/10.0

TECHNICAL SKILLS

- Python
- SQL
- Power BI
- Statistics
- Machine Learning
- MS Excel

CERTIFICATIONS

- Data Science NSDC
- Google Analytics (GA4)
- Joy of computing through python - NPTEL
- Data Science – NPTEL

PROJECTS

1. **Airline Data Management and Analysis using Power BI**
 - Transformed and cleaned airline datasets in Power Query, standardizing data for effective analysis and visualization.
 - Created DAX measures and built interactive Power BI dashboards, analysing passenger bookings, flight performance, and enabling dynamic reporting with relationships, slicers, and drill-throughs for real-time insights.
2. **KPMG Data Analysis using Excel**
 - Cleaned and organized customer, transaction, and demographic data to ensure accuracy, supporting reliable analysis and reporting.
 - Analysed sales trends, product performance, and customer behavior to provide insights, estimate revenue, and identify high-value customer segments using Customer Lifetime Value (CLV).
3. **Walmart's Retail insights optimization**
 - Analysed sales growth, customer segmentation, and product performance using MySQL queries to identify top-performing branches, profitable products, and key trends for strategy optimization.
 - Segmented customers into spending tiers, identified repeat buyers, and analyzed payment preferences by city, providing actionable insights and visualizations to support decision-making.
4. **Electric Vehicles Market Size Analysis**
 - I have analyzed datasets related to electric vehicles (EVs), focusing on uncovering meaningful insights. I filtered EVs based on budget and range criteria, grouped them by manufacturer, and calculated average battery capacities.
 - Additionally, I developed an EV recommendation system in Python that allows users to input their budget, desired range, and battery capacity to find the best matches.
5. **J P Morgan's classification for legal documents**
 - Used CRISP DM methodology steps from data science.
 - Applied feature extraction and preprocessing to improve model accuracy.

SOFT SKILLS

- Critical Thinking
- Communication skills
- Adaptability in new technologies
- Problem-solving
