

TEJAS GHORPADE

DATA ANALYST

CAREER OBJECTIVE

Highly motivated and detail-oriented aspiring Data Analyst with a data science certification and strong proficiency in Python, SQL, Excel, Google Sheets and Power BI. Eager to leverage analytical skills to extract actionable insights, optimize processes, and contribute to data-driven business growth in a dynamic environment

EDUCATION

BSC DATA SCIENCE

New Arts, Commerce And Science College
2022-2025

HSC

Vidyadham Prashala Jr College of Science
2021-2022

SSC

Vidyadham Prashal
2019-2020

SKILLS

- Python
- PowerBI
- Excel
- MySQL
- Google Sheets
- Pandas
- Statistics
- Numpy

PROJECT

ZOMATO SALES ANALYSIS USING PYTHON

- Analyzed and Visualized Zomato Restaurant Data: Utilized Python (Pandas, NumPy, Matplotlib, Seaborn) to conduct comprehensive data analysis and create insightful visualizations from a restaurant dataset.
- Executed Data Preprocessing: Implemented custom functions to clean and transform raw data, including converting string-based ratings to numerical formats, ensuring data quality for analysis.
- Conducted Exploratory Data Analysis (EDA): Explored dataset structures, identified data types, and assessed data completeness to gain initial insights into restaurant trends and characteristics.

PIZZAHUT SALES ANALYSIS USING MYSQL

- Utilized advanced SQL concepts, including GROUP BY, ORDER BY and subqueries, to analyze complex data aggregations and manipulations.
- Identified top-selling pizza types and sizes, calculated total revenue, and analyzed sales distribution by hour and category.
- Determined the highest-priced pizzas and their contribution to overall revenue, providing insights into pricing and sales strategies. Total sales is 817860. People order L size pizza with a count 18256. Average order per day is 138. Classic category pizza gives most revenue about 26.91 percent of total revenue.

TRANSPORT AND MOBILITY ANALYSIS USING POWERBI

- Quantified passenger engagement by analyzing over 238K total passengers in Jaipur and identified a 25.73% repeat passenger rate in one city. Assessed service quality by analyzing average driver ratings, with insights.
- Analysing average ratings around 7.83 to 7.98 across cities. Examined financial performance by analyzing average fare amounts, such as an average fare of ₹254.02 and average distances, around 19.13 km per trip.
- Analyzed total fare generation, noting that cities like Chandigarh generated over ₹1.1 crore (₹1,10,58,401.0) in total fares from 38,981 trips.
