SUMMARY

Results-driven Data Analyst with real-world experience from my [internship at Jetpac](#). I'm skilled at using Python, SQL (Snowflake), Excel and visualization tools like Looker Studio and Tableau to build dashboards and automate processes that make a difference. I enjoy collaborating with teams, especially in fast-paced environments, and I have a knack for explaining complex data in ways that help drive smart business decisions.

TECHNICAL SKILLS

- Programming & Databases: SQL (Snowflake, Advanced Queries, Views), Python (Pandas, NumPy, Matplotlib, Seaborn, Streamlit), Excel (Advanced Formulas, PivotTables)
- Data Visualization & Reporting: Tableau, Looker Studio, Google Sheets, Data Wrangling, Handling Missing Values, Data Validation
- Data Engineering & Warehouse: Snowflake (Data Modelling, ETL Processes, Query Optimisation), Excel-based ETL workflows
- Machine Learning & Statistics: Scikit-learn (Customer Churn Prediction, RFM Analysis), Logistic Regression fundamentals, Descriptive Statistics, Regression Analysis
- Business Analysis & Project Management: Requirement Gathering, User Stories, Market & Competitor Research, Agile methodologies, SDLC understanding, Collaboration Tools: Jira, Google Docs

EXPERIENCE

Jetpac | Intern Analyst Engineer | Remote

- Developed a [referral dashboard](#) in Looker Studio to track daily referral revenue, customer acquisition, referral performance, and segmentation metrics, enabling data-driven marketing decisions and [helping increase referrals by 50%](#).
- Built a [Python Streamlit application](#) integrated with Snowflake to automate [finance team](#) data loading and retrieval with a single command, reducing manual processing time and [cutting the finance team's workload by three days](#).
- Collaborated in [daily standups](#) with lead analyst to [write complex SQL queries](#), [create tables/views](#), implement data cleaning, and apply Snowflake best practices for optimised data models and queries.

SELF-DIRECTED LEARNING PROJECTS

- **Customer Churn Prediction Model:** I developed a churn prediction model in Python using scikit-learn that achieved 85% accuracy. By analysing customer activity patterns, it enables proactive outreach to at-risk customers, boosting retention efforts.
- **Interactive Dashboards:** Created Tableau dashboards to showcase top car companies, best-selling models, and yearly sales trends, turning complex car sales data into easy insights for faster, informed decisions.
- **SQL & Excel Sales Analysis:** Diving into sales records with SQL queries and Excel's advanced formulas, I uncovered seasonal buying patterns and customer behaviors.
- **Customer Segmentation with RFM Analysis:** I applied RFM (Recency–Frequency–Monetary) analysis in Python to group customers by value, tailoring offers as per groups to high-value segments, which made campaigns more effective.
- **Exploratory Data Analysis on Public Dataset:** I explored a public education dataset and revealed how study hours, parental involvement, and sports participation impact student scores, sharing results in an easy-to-understand report with charts.

EDUCATION

Bharati Vidyapeeth College of Engineering, Pune

Bachelor of Technology in Electronics and Communication Engineering | CGPA: 8.7

Dr. Virendra Swarup Public School, Kanpur

Xth Board: 86.3% | XIIth Board: 78.4%

CERTIFICATIONS

- Cisco: [Data Analyst Essentials Certification](#)
- LinkedIn Learning:
 - [SQL Essential Training](#)
 - [Excel Essential Training \(Microsoft 365\)](#)
- DeepLearning.AI: [ChatGPT Prompt Engineering for Developers](#)
