WORK EXPERIENCE

Software Tester | DotcomPal Pvt Ltd | Kota, Rajasthan

(apr 2024 – Present)

- Performed manual testing on web-based applications, reporting bugs and validating fixes.
- Designed and executed test cases to ensure software functionality, reliability, and usability.
- Collaborated with development teams using tools like JIRA and Excel to log issues and track testing progress.
- Participated in Agile meetings, contributing to sprint planning and retrospectives.

Python Developer Intern| GIP Pvt Ltd | Jaipur, Rajasthan (July-

2023- August-2023)

- Work with the development team to create and maintain web applications using Python, Flask, and MYSQL
- Collaborated with senior developers to contribute to the design, development, and deployment of Python applications and projects.

PROJECTS

Inventory Management Insights – [Power BI | SQL | Excel | Power Query | DAX]

- Designing a Power BI dashboard to monitor stock movement, track reorder levels, and identify slow-moving inventory using sales and inventory datasets.
 - Integrating data from multiple sources (Excel/CSV for warehouse logs and SQL for product master data).
 - Modeling the data into a star schema using Power BI relationships and Power Query for transformation.
 - Creating KPIs like **Stock Turnover Ratio, Reorder Alerts, Overstock Trends, Inventory Aging** with DAX measures.
-

Customer Retention & Churn Dashboard – [Power BI | SQL | Excel | DAX]

- Building an interactive Power BI dashboard to analyze customer retention patterns across time, region, and product lines.
 - Cleaning and shaping customer order data using Power Query and loading it from SQL + Excel sources.
 - Applying cohort analysis and DAX time intelligence to compute **retention %, churn %, and repeat purchase behavior**.
 - Designing the dashboard with drill-down filters (by month, region, segment) to help identify high-risk churn cohorts.
 - Final goal is to provide marketing with actionable insights to improve customer engagement and retention strategy\
-

PIZZA Sales Analytics(Power BI,SQL,Python,Sql Management Studio

- Utilized SQL for efficient data extraction and transformation, ensuring accuracy in processing large datasets related to pizza sales quantities.
- Employed Python to further manipulate and analyze pizza sales data, enriching insights derived from the dataset.
- Designed intuitive visualizations and interactive features within Power BI to simplify interpretation and aid stakeholders in making informed decisions regarding pizza sales.
- Implemented advanced analytics techniques to uncover trends, patterns, and correlations specific to pizza sales quantities, empowering strategic decision-making in the pizza business.

CERTIFICATIONS

- Introduction to Data Analytics - Simplilearn**
- Analytics with Python and SQL- Great Learning**
