## SUMMARY

Data Analyst with 2 years of academic experience in data cleaning, wrangling, and transformation using Python (Pandas, NumPy) and SQL. Skilled in creating interactive dashboards and data visualizations with Tableau and Power BI to communicate insights and support business decision-making.

## EDUCATION

Pillai College of Arts, Commerce & Science, Navi Mumbai Jul 2023 – Apr 2025  
Master of Science in Data Analytics | CGPA: 7.83 / 10

Pillai College of Arts, Commerce & Science, Navi Mumbai Jul 2019 – Apr 2022  
Bachelor of Science in Information Technology | CGPA: 8.32 / 10

## SKILLS

Tools & Languages: Python, SQL, Power BI, Tableau, Excel, Pandas, NumPy, Scikit-learn

Visualization: Tableau, Power BI, Matplotlib, Seaborn

ML Techniques: Regression, Classification, Supervised Learning

Database & ETL: MySQL, PostgreSQL, Power Query

Statistical Analysis: A/B Testing, Hypothesis Testing, Data Cleaning

Soft Skills: Problem-Solving, Critical Thinking, Communication, Attention to Detail

## INTERNSHIP EXPERIENCE

Data Science Intern | IStop.ai Feb 2024 – Apr 2024

- Developed NLP models for spam and hate speech detection using TF-IDF, Logistic Regression, and Naive Bayes classifiers.
- Conducted exploratory data analysis (EDA) on credit risk datasets using Pandas, Seaborn, and Matplotlib to identify key insights.
- Performed data cleaning, feature engineering, and model evaluation with Scikit-learn in Jupyter Notebook for improved model accuracy.

## PROJECT

Business Sales Dashboard (Power BI & SQL) Jan 2025

- Designed a dynamic Power BI dashboard using SQL and DAX to monitor key sales KPIs, revenue trends, and regional performance across business units.
- Streamlined the reporting process by automating data refresh and visualization workflows, resulting in a 50% reduction in manual reporting time.

Customer Churn Prediction (Python & ML) Jan 2025

- Built a predictive churn model using Logistic Regression and Random Forest in Python, achieving 87% accuracy by engineering meaningful features and tuning hyperparameters.
- Conducted detailed exploratory data analysis (EDA) to uncover key customer behavior patterns contributing to churn.

Retail Data Analysis (Excel & Tableau) Feb 2025

- Analyzed and cleaned retail sales datasets in Excel, then visualized insights using Tableau dashboards to highlight sales performance, seasonal patterns, and inventory issues.
- Identified customer segments and trends to support data-driven marketing and inventory planning decisions.

## CERTIFICATIONS

- Data Analytics Essentials – Cisco Networking Academy
- Tableau for Data Visualization – Pillai College of Arts, Commerce & Science
- Python for Data Science and Machine Learning – Udemy
- Data Science Foundations – 5MinuteEngineering (YouTube)
